Full stack developer who ships and runs whole products: schema, API, billing, infrastructure, deploy, and the frontend when it needs me. I built Raidium alone, a multi-tenant guild management SaaS with ~225 API routes and on-chain USDt payments serving 6+ MMORPG guilds, and I have authored 56% of the commits on an internal operations platform for a real estate franchise. BSIT Cum Laude, Best Capstone Project, Programmer of the Year.
